

How to Teach with Green Ninja

Below is the standard model for teaching with Green Ninja in a physical classroom.

1. Teacher Portal *Prepare for class*

A digital platform to access lesson plans, presentations, student files, and other teaching tools for all types of learning environments. A quick tutorial is provided at the end of this booklet to get you started.

3. Student Workbooks *Assign work for students*

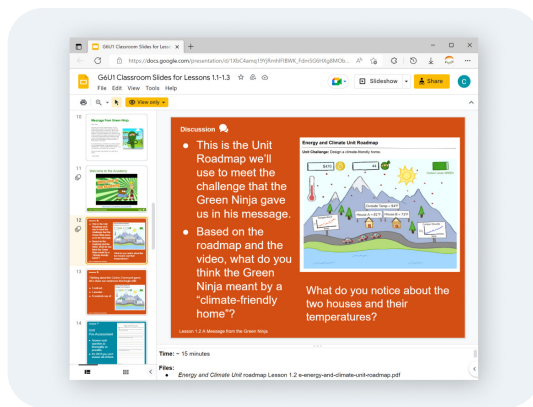

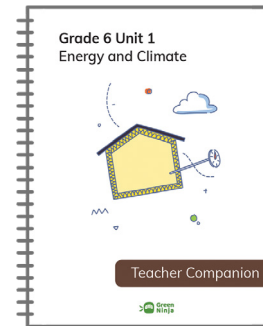

Physical workbooks include copies of all student-facing files and allow students to complete assignment. (All files are identical to those found in the Teacher Portal.)

As a digital alternative, editable versions of the Student Workbook pages are accessible through the Teacher Portal. This includes all assessments, worksheets, and readings.

How to Teach with Green Ninja

For teachers who prefer physical materials, the Teacher Companion book is a printed alternative. It includes all lesson plans, unit information, links, and learning files.

2. Classroom Slide Decks

Present to the class

Show the Classroom Slide Deck to help guide your class with visuals for every presentation and activity.

4. Materials Kits

Make the learning tangible

Your students also work with materials provided in the Materials Kits to engage in hands-on learning.
